Katatsumuri ("snail")

Misujimaimai

Katatsumuri are land snails that have a coiled shell.

There are around 700 species of Katatsumuri in Japan.

Yokohama is home to about 60 species.

Who eats it?

Maimaikaburi

("Japanese ground beetle")

Found between June and September.

Both adults and larvae are
carnivorous.

They also feed on other organisms
such as earthworms.
